Bright TV Audience Insights & Recommendations

Executive Insights

1. Large and diverse audience The dataset contains 10,000 viewing sessions from 4,386 unique viewers, providing a strong basis for understanding audience behaviour, demographics and viewing patterns.
2. Viewing is concentrated around peak hours Audience activity varies considerably throughout the day, with 15:00 identified as the peak viewing hour. This indicates an opportunity to align high-value programming and advertising placements with periods of stronger audience activity.
3. Channel performance is uneven The dashboard shows differences in viewing-session volumes across channels, with Live Events, Trace TV, Africa Magic and Channel O among the prominent channels in the dataset. This suggests that audience demand is concentrated around particular content categories and channels.
4. Weekend viewing shows strong engagement Saturday records the highest number of viewing sessions at 1,655, followed closely by Friday at 1,642. Monday has the lowest volume at 974 sessions. This suggests that viewing behaviour is stronger toward the weekend and could support targeted weekend programming and advertising strategies.
5. Audience demographics reveal a predominantly male audience The gender analysis shows 85.5% male viewers, 11.2% female viewers and 3.3% with no recorded gender value. This indicates a strongly male-skewed audience profile within the available data.
6. Regional audience distribution can guide targeting The dashboard provides a regional view of unique viewers across provinces including Eastern Cape, Western Cape, Limpopo, Gauteng, Free State, KwaZulu-Natal and Mpumalanga. This creates an opportunity to develop geographically targeted programming, advertising and audience-growth strategies.
7. Audience behaviour differs by age and screen-time segment The dashboard segments viewers by age group and screen-time usage, allowing Bright TV to distinguish between lighter and heavier users and understand which audience groups contribute most to viewing activity.

Business Recommendations

1. Optimise prime programming: Prioritise high-performing content and advertising placements around peak viewing periods, particularly the afternoon and stronger weekend periods.
2. Invest in high-performing channels: Use channel-level viewing data to identify content that consistently attracts viewers and inform future programming decisions.
3. Develop weekend campaigns: Friday and Saturday show particularly strong viewing-session volumes. These periods could be prioritised for premium advertising and audience-engagement campaigns.
