Executive insight summary

Every statement below is recalculated from the filtered dataset — read this in 30 seconds

THREE MOST IMPORTANT FINDINGS

- 1

60.6% of hours sit in 3 channels

ICC Cricket World Cup 2011, Live Events, Channel O carry 923 h of the 1,523 h watched. ICC Cricket World Cup 2011 alone holds 27.1%.
- 2

13:00–16:00 is the demand peak

That three-hour block carries 22.9% of all viewing hours; 15:00 is the single busiest hour with 127 h.
- 3

9m 08s average session

4,386 distinct subscribers (DISTINCT sub_id) generated 10,000 viewing records and 1,523 h of watch time in the filtered period.

AUDIENCE OPPORTUNITIES

- 1

Youth, 57.7% of hours

2,424 unique viewers averaging 9m 11s per session — the highest-value audience for advertisers.

2 Pensioner at only 0.4% of hours

Pensioner viewers watch 6.1 h across 27 subscribers. Targeted scheduling here is the cheapest incremental reach available.

**CHANNEL & PROGRAMMING OPPORTUNITIES****1 ICC Cricket World Cup 2011 holds attention longest**

Average session of 16m 53s across 1,465 records — its format should be replicated in the afternoon slot on lower-performing channels.

2 MK underperforms its reach

MK records 32 sessions but only 0.7 h (0.0% of hours). Re-slot or re-programme this channel before adding new inventory.

→ RECOMMENDED BUSINESS ACTION

Build a premium 13:00–16:00 package on ICC Cricket World Cup 2011, Live Events, Channel O aimed at Youth viewers in Gauteng.

This combination covers 60.6% of viewing hours and the peak demand window, reaching 2,424 youth subscribers. Per-day averages: 207 h weekday vs 244 h weekend.

ACT 1**How big is the audience?**

Headline volume, the shape of viewing over the period, and the channels and hours carrying the load.

AUDIENCE

Youth is the largest viewing segment

Youth viewers account for 57.7% of total viewing time (878 h) across 2,424 unique subscribers.

CHANNEL

ICC Cricket World Cup 2011 generates the most viewing time

ICC Cricket World Cup 2011 delivers 412 h (27.1% of all hours), ahead of Live Events at 318 h. Average session: 16m 53s.

TIMING

Peak viewing occurs between 13:00 and 16:00

The single busiest hour is 15:00 with 127 h. The strongest three-hour window carries 22.9% of all viewing time.

REGION

Gauteng contributes the highest viewing activity

Gauteng accounts for 36.3% of viewing hours from 1,607 unique viewers (3,654 records).

BEHAVIOUR

Weekend days run 18.2% hotter than weekdays

Per-day average: 207 h on a weekday vs 244 h on a weekend day. Total weekday 1,034 h vs weekend 489 h.

 DEMOGRAPHICS**Male viewers lead on viewing time**

Male holds 88.5% of hours. 2.6% of records have no recorded gender and are kept as "Unknown / Not Available".

 ENGAGEMENT**No Usage dominates the screen-time mix**

69.8% of viewing records sit in the No Usage bucket. Overall average session length is 9m 08s.

 DAYPART**Afternoon is the strongest daypart**

Afternoon carries 37.0% of viewing hours (564 h) from 2,163 unique viewers.

What should the business do?

Data-driven actions, each with the evidence behind it

1 PROGRAMMING**Protect and expand the afternoon schedule on ICC Cricket World Cup 2011, Live Events, Channel O.**

Evidence: These three channels alone carry 60.6% of all viewing hours, and Afternoon is the top daypart with 564 h.

2 ADVERTISING**Sell premium inventory around 15:00–16:00 targeting the Youth segment.**

Evidence: 15:00 is the peak hour (127 h) and Youth viewers deliver 57.7% of total hours from 2,424 subscribers.

3 AUDIENCE GROWTH**Run acquisition and localisation campaigns in Northern Cape.**

Evidence: Northern Cape contributes only 1.8% of viewing hours (82 unique viewers) — the lowest of the named regions.

4 CONTENT STRATEGY**Use ICC Cricket World Cup 2011 as the template for long-form engagement and cross-promote it into weaker slots.**

Evidence: ICC Cricket World Cup 2011 holds the longest average session at 16m 53s across 1,465 records.

5 PORTFOLIO REVIEW

Review the schedule for Break in transmission and MK.

Evidence: They sit at the bottom of the ranking with Break in transmission: 0.9 h, MK: 0.7 h despite meaningful record volume.

Analyst notes

Method, scope and known limitations behind the numbers

DATASET SIZE

10,000 viewing records covering 4,386 distinct subscribers (sub_id). 10,000 records match the current filters.

DATE RANGE

2016-01-01 to 2016-03-31 (90 distinct watch dates).

 KEY METRIC DEFINITIONS

- Unique Viewers = COUNT(DISTINCT sub_id) over the filtered rows, so a subscriber watching five times is counted once.
- Total Viewing Hours = SUM(duration in seconds) / 3600.
- Avg Viewing Duration = SUM(seconds) / COUNT(records) / 60, i.e. average length of one viewing session.
- Viewing Records = row count, used as a frequency (session) measure rather than a reach measure.

HOW VIEWING DURATION WAS CALCULATED

The source "duration" column is a HH:MM:SS text field. It was parsed to total seconds (hours×3600 + minutes×60 + seconds) at load time; every time metric is aggregated from that numeric column and only formatted back to hours/minutes for display.

 DATA-QUALITY LIMITATIONS

- Race: 1,169 records (11.7%) with no value
- Gender: 262 records (2.6%) with no value
- 17 fully duplicated rows detected in the source file; they are retained and reported rather than silently dropped.
- Missing demographics are never imputed — they are labelled "Unknown / Not Available" so demographic shares are read against a visible unknown bucket.
- The dataset records viewing sessions only; it carries no revenue, cost or content-genre fields, so monetisation statements are directional.
